Be Prepared for Rising Energy Prices

Odyssey
Intelligent Hybrid Ventilation

CSR

Energy Efficiency Really Does Matter

Nobody would want to sleep in 1★ rather than 5★ hotel, so why would you continue to live in a 1★ energy rated home? New affordable technologies mean that you can quickly increase the energy and water efficiency of your home. Not only is this much better for the environment, it can lead to serious savings on your utility bills. South Australian Electricity prices are predicted to rise by 14% over the next few years. Similarly, gas prices have doubled in the last decade & are set to rise further. The difference between efficient and inefficient homes represents hundreds of dollars per year.

Smart Energy Saving from Bradford CSR

The Bradford Odyssey Intelligent Hybrid Ventilation System is a great compliment to any air conditioning system, and can save you serious amounts of cash. During a hot day, walls, ceilings and roof-space soak up significant amounts of heat. This retained warmth makes it difficult to cool your home. By using an Odyssey, warm air from your house is automatically vented outside. You can therefore reduce both the day and night use of your air conditioning unit, lowering your electricity bill and reducing noise pollution. Not only that, the constant ventilation will help remove odours and prevent the build up of damp and mould.

Q: What are the common ways to improve the energy efficiency of your home?

A: Upgrading your old Hot Water Service to new Instantaneous Gas, Heat Pump or Solar Hot Water can save you hundreds of dollars a year in energy costs. Lighting makes up a sizeable chunk of your electricity bill. LED Lights use less than a third of the energy consumed by conventional lighting whilst lasting five to fifteen times longer. Heating and cooling is the major electricity and gas consumer in your home, accounting for around 40% of all energy used. Investing in compliments to your heating and cooling systems can help reduce their usage. Bradford Odyssey Ventilation systems remove hot air from your home, meaning you can significantly reduce your AC usage.

Signs and Symptoms: An Inefficient House

- Do you have an old Hot Water Service?
- Outdated heating and cooling?
- Haven't upgraded your lights to LEDs?
- Wanted Solar power but uncertain of the options?
- Unable to monitor and control your energy usage?

sharp tech+

The innovative PUSH controller system allows seamless and easy control of the technology in your home. Not only does it allow control of lighting and audio-visual devices, it can monitor and control your climate and energy systems, blinds or security apparatus. PUSH enables the management of your heating or cooling at the touch of a button, including the ability view energy usage, giving you more control over the management and consumption of power in your home.
